

ACCELRYS HEOS® SAAS DATA MANAGEMENT AND COLLABORATION

Accelrys HEOS® is a SaaS secure web-based drug research information management software platform that supports geographically-distributed scientists and facilitates collaboration.

The complex process of transforming a hit into a clinical candidate involves data generated by a broad range of sources. The success of the project relies on the capability of the partners to easily, securely and efficiently access, share and communicate critical information in a timely manner. Accelrys HEOS® is a web portal that provides a secure and user-friendly data handling system. It allows authorized collaborators to view results and make informed decisions.

DATA MANAGEMENT

- Comprehensive acquisition, organization and display of various types of information relevant to Drug Discovery projects: chemistry, analytical, biological assays, animal assays, ADME, toxicology, pharmacokinetics, etc.
- Powerful chemical-biological searching capabilities, including substructure searching
- Interactive SAR capabilities
- Flexible export to third-party software such as Pipeline Pilot and SpotFire for further data analysis

COLLABORATION

- Secure world-wide connection through a web interface with data access-control to the data
- Easy publication of results from each project member
- Share decision-making reports
- Securely exchange and organize key project documents

Accelrys HEOS® has, over the past seven years, supported many discovery programs from early discovery to the pre-clinical stage. It is heavily used by users around the world including large pharmaceutical companies and biotechnology companies.

Accelrys HEOS® supports the research database and partners' network of large organizations involved in the research for neglected diseases. It captures, harmonizes and consolidates information from more than 80 organizations worldwide and across all continents. Accelrys HEOS® has become the standard knowledge-sharing resource for neglected diseases drug discovery.
