

Accelrys Implementation Services

Let us install, configure, and migrate your data into Accelrys products, getting you up and running as quickly as possible and maximizing your productivity.

We will work closely with you to understand your needs and your environment – and will tailor our implementation approach to best meet those needs.

Accelrys Implementation Services will install and configure Accelrys products in your systems environment, enabling you to get up and running with Accelrys software as quickly as possible. Our experience with our own products enables us to:

- **adapt the configuration to retain the highest performance for unique local circumstances**
- **deal with the unexpected, ensuring that your implementation is done right**
- **verify the implementation, ensuring that everything is working as expected**

When you have data to migrate, Accelrys Implementation Services will help you with any data cleanup and reassessment you need before migration, and with mapping to the Accelrys environment. We can then carry out the entire migration, protecting your data throughout the process, and enabling you to be productive with your own data in the Accelrys system in the shortest possible time.

Professional installation by Accelrys guarantees an optimum configuration to meet your requirements, a shorter implementation time to get a production version working, and reduced downtime later.

Accelrys Implementation Services is just one of our service offerings. Accelrys Client Services is focused on delivering the solution to your problem.
